

GREECE (GRE)

Population: 10.5 million (1998)
Area: 131 944 km²

The designations and the presentation of material on this map of the Member States of the WHO European Region (as at 31 July 1997) do not imply the expression of any opinion whatsoever on the part of the World Health Organization concerning the legal status of any country, territory, city or area or of its authorities, or concerning the delimitation of its frontiers or boundaries. Dotted lines represent approximate border lines for which there may not yet be full agreement.

1. General information

The Centre for Surveillance and Intervention (CSI) of the Hellenic Centre for Infectious Diseases Control is the centre for the surveillance and control of foodborne infections and intoxications in Greece.

NCSI collects, processes and analyses the data provided by the following Centres: (see also flowchart on the next page)

1. The 57 district health authorities in the country
2. The Hospital Microbiological Laboratories
3. The Reference Centres:
 - The National Salmonella and Shigella Reference Centre (National School of Public Health, Athens)
 - The Salmonella Reference Centre for Macedonia – Thrace (Infectious Diseases Hospital – Thessaloniki)
 - The National Reference Centre of Parasitology, Zoonoses and Geographical Medicine (University of Crete, Heraklion)

Individual epidemiological forms are provided to the Centre by the District Health Authorities on a monthly basis. Aggregated data is collected from the Hospital Laboratories on a weekly basis and from the Reference Centres on a monthly basis. However, in case of Hepatitis A or Brucellosis epidemics, epidemiological forms are sent daily.

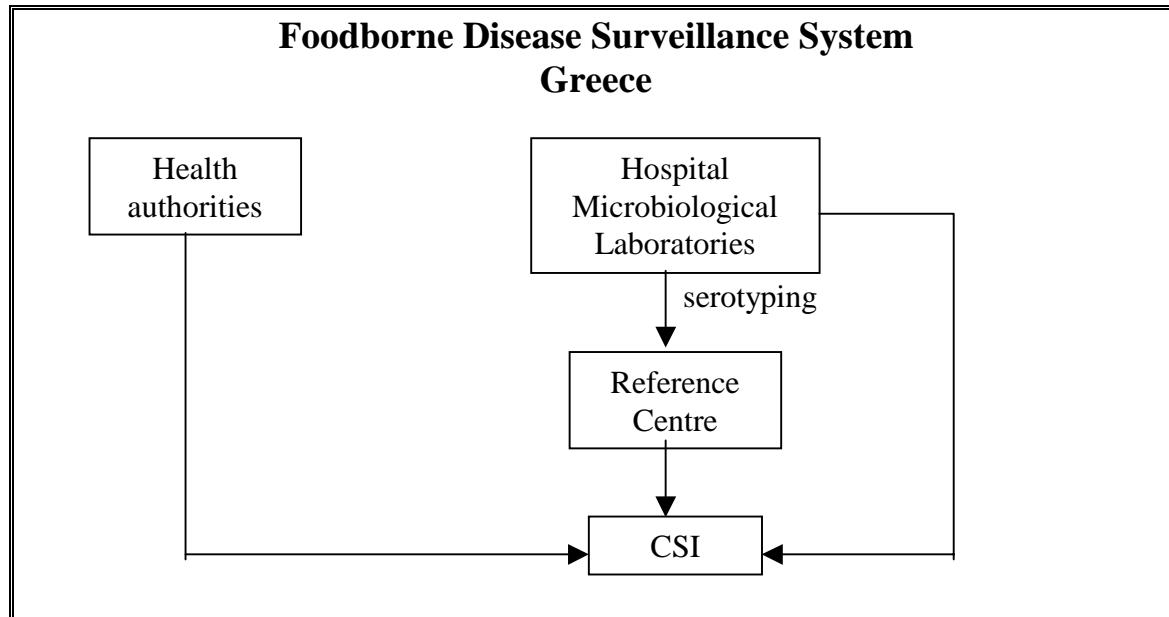

WHO Surveillance Programme for Control of Foodborne Infections and Intoxications in Europe
7th Report

Country Reports: GREECE 1993 – 1998

The Centre is responsible for the dissemination of information to the Ministry of Health and the immediate intervention if necessary.

Note: CSI was established in 1998. Data provided for 1998 is more complete and therefore the observed increase in cases for this year may be attributed to the better reporting system.
