

15. BfR User Conference on Product Notifications Expert Conference

5 November 2024, Berlin

15. BfR User Conference on Product Notifications:

Stay up to date and exchange ideas with experts!

The German Federal Institute for Risk Assessment (BfR) invites you to the 15. BfR User Conference on Product Notifications. The event addresses all actors involved in the notification process and those who use the information, such as industry, national and regional authorities and poison information centers in Germany and Europe.

Since 1 January 2024, the following applies: all product notifications in the PCN procedure!

As of the beginning of this year, all products that are subject to a notification obligation in accordance with Article 45 and Annex VIII of the CLP Regulation must be transmitted to the responsible authorities in the EU states using the PCN procedure. The demands on those involved remain high, and challenges of a content and technical nature still need to be mastered. The BfR User Conference offers you the ideal opportunity to get up to date, clarify open questions with experts and exchange your experiences and solutions with other participants.

Look forward to an informative programme:

- Lectures by representatives of national and European authorities
- Presentation of software solutions
- FAQs on practical questions regarding product notifications

Take advantage of the opportunity to exchange ideas and to network!

The conference will take place at the German Federal Institute for Risk Assessment in Berlin and can also be followed online.

You are welcome to submit your topic suggestions in advance of the event to produkt-meldungen@bfr.bund.de.

Register now and take part!

We look forward to your participation!

About the BfR

The German Federal Institute for Risk Assessment (BfR) is a scientifically independent institution within the portfolio of the German Federal Ministry of Food and Agriculture (BMEL). It advises the Federal Government and the federal states ("Laender") on questions of food, chemicals and product safety. The BfR conducts its own research on topics that are closely linked to its assessment tasks.
