

Empfehlungen zur Sperrung von Küsten nach der Anschwemmung von flüssigen Ladungsresten

Aktualisierte Information Nr. 001/2018 des BfR vom 16. Januar 2018*

Angespülte Öle oder chemische Produkte können Küsten und Strände nicht nur verschmutzen, sondern auch zu einem Gesundheitsrisiko werden. Ursachen der teerigen Klumpen oder Anschwemmungen schlickiger Flecken sind häufig illegal abgelassene Maschinenöle, illegal eingeleitete Ladungsrückstände aus Öltankern oder ausgespülte Ladungsrückstände aus anderen Tankschiffen. Besonders große Mengen können nach Havarien in das Meer gelangen. Manche Substanzen können krebserzeugend, hautätzend und gefährlich für Schwangere sein, wenn sie nicht sofort abgewaschen werden. Die Vereinten Nationen haben aufgrund dieser Risiken Empfehlungen zur Sperrung von Küstenabschnitten bei der Anschwemmung flüssiger Ladungsreste nach Schiffsunfällen oder illegalen Einleitungen erarbeitet. Damit steht für die Länder ein Instrument bereit, kurzfristig angemessene Maßnahmen zum Schutz der Bevölkerung einzuleiten.

Die Empfehlungen wurden von der Expertengruppe der Vereinten Nationen zu wissenschaftlichen Aspekten des marinen Umweltschutzes (GESAMP), in der unter anderem Vertreter der Internationalen Seeschiffahrtsorganisation (IMO), des Umweltprogramms der Vereinten Nationen (UNEP), der für Fischerei zuständigen Ernährungs- und Landwirtschaftsorganisation der Vereinten Nationen (FAO) und auch des Bundesinstituts für Risikobewertung (BfR) mitarbeiten, erstellt.

Dazu wurden die gesundheitsgefährlichen Wirkungen von rund 900 Chemikalien auf Grundlage wissenschaftlicher Literatur und Untersuchungen der Hersteller bewertet. Es wurde auf die bei der Internationalen Seeschiffahrtsorganisation vorliegenden oft vertraulichen Meldedokumente der in Chemikaliertankern beförderten flüssigen Stoffe zurückgegriffen. Neben dem Vergiftungspotenzial und der akuten Toxizität wurden die langfristigen gesundheitsschädlichen Risiken der Stoffe, einschließlich der krebserzeugenden, mutagenen und die Fortpflanzung beeinträchtigenden Eigenschaften (chronische Toxizität) berücksichtigt. Die aktuelle Liste umfasst die wichtigsten flüssigen Massengüter, die in Chemikaliertankschiffen bzw. NLS-Tankern befördert werden, und unterteilt das von den Stoffen ausgehende Gesundheitsrisiko in vier Stufen, die abgestufte Maßnahmen ermöglichen sollen:

Stufe 0 – keine Gesundheitsgefahr

Stufe 1 – Warnung der Bevölkerung

Stufe 2 – Teilsperrung der Küstenabschnitte mit eingeschränkter Nutzung

Stufe 3 – Sperrung des betroffenen Küstenabschnittes

Das BfR stellt im Folgenden die Liste mit den Namen der Stoffe und den Empfehlungen von GESAMP zur Verfügung.

Empfehlungen

Die Einstufungen beruhen auf Bewertungen der Working Group on the Evaluation of the Hazards of Harmful Substances Carried by Ships der IMO/ FAO/ UNESCO-IOC/ WMO/ WHO IAEA/ UN/ UNEP Joint Group of Experts on the Scientific Aspects of Marine Environmental Protection (GESAMP). Sie sind als Leitlinien für Sicherungsmaßnahmen an Küsten

* Die aktualisierte Fassung der Stellungnahme ersetzt die Stellungnahme Nr. 030/2015 vom 14. September 2015

nutzbar, wenn Reste flüssiger Ladungen angeschwemmt werden, bis fachkompetente Einschätzungen und Messungen durch Experten vor Ort vorliegen. Eine starke Verdünnung der Stoffe im Wasser kann die Gefährlichkeit der Stoffe verringern und zu einer geringeren Einstufung führen.

Für einige flüssige Massengüter ist aufgrund mangelhafter Information keine Angabe („k.A.“) einer Einstufung möglich. Auch eine Offenlegung der Datenlücken für eine gesundheitliche Bewertung gegenüber den Herstellern führte nicht zu einer Bereitstellung toxikologischer Information, die hierzu ausgereicht hätte.

Die Liste der Stoffe orientiert sich an den Bezeichnungen, die als „Produktbezeichnungen“ beim Transport flüssiger Massengüter gelten und sich aus den Regelungen des Internationalen Codes für den Bau und die Ausrüstung von Schiffen zur Beförderung gefährlicher Chemikalien ergeben.

Stufe 0 – Keine Gefahr

Es ist keine Warnung zu veröffentlichen, da kein Risiko für Gesundheitsschäden besteht, keine leichte Entzündung befürchtet werden muss, und es zu keiner Filmbildung auf der Wasseroberfläche kommen kann.

Stufe 1 – Warnung

Es wird empfohlen, eine Warnung zu veröffentlichen, die Nutzer betroffener Küstenbereiche oder Strandabschnitte auf mögliche Risiken aufmerksam macht. Ein direkter Kontakt mit diesen Stoffen kann zu leichter Reizung von Haut und Augen führen. Insbesondere bei Kindern kann es zu Vergiftungen kommen, wenn solche Stoffe verschluckt werden. Einige der genannten Stoffe schwimmen als Film auf der Wasseroberfläche, ohne für Menschen besonders gefährlich zu sein.

Stufe 2 – Teilspernung

Es wird empfohlen, eine Warnung zur eingeschränkten Nutzung betroffener Küstenbereiche oder Strandabschnitte auszusprechen. Personen ohne entsprechende Ausbildung oder Schutzkleidung dürfen die verunreinigten Bereiche nur in Ausnahmefällen betreten. Ein direkter Kontakt kann zu starker Reizung von Haut und Augen, aber auch zu Vergiftungen führen. Einige der aufgeführten Stoffe sind äußerst gefährlich für Schwimmer, können selbst im Wasser verdünnt beim Verschlucken Lungenschäden oder Vergiftungen hervorrufen. Einige der genannten Stoffe können sich unter Hitzeeinwirkung explosionsartig entzünden.

Stufe 3 – Sperrung

Es wird die Sperrung betroffener Küstenbereiche oder Strandabschnitte empfohlen. Nur Personen mit entsprechender Schutzkleidung dürfen die verunreinigten Bereiche betreten. Für ungeschützte Personen besteht die Gefahr schwerer gesundheitlicher Schäden, vor allem, wenn sie Dämpfe einatmen oder Hautkontakt entsteht. Es besteht das Risiko der schnellen Zerstörung der Haut, tödlicher Vergiftungen oder langfristiger Gesundheitsschäden. Insbesondere Schwangere und Kinder sind deutlich gefährdet. Einige der hier aufgeführten Stoffe bilden einen Film auf der Wasseroberfläche und erzeugen beim Verschlucken schwere Lungenschäden, die für Kinder lebensgefährlich sind.
