Endokrin aktive Substanzen in Sonnenschutzmitteln

Gisela H. Degen

Member of SCCP / SCCS (2004 – 2016); Chair of WP CosIng (2015-2016)
Now: External Expert of SCCS
Member of former EFSA Scientific Committee on Hazard Assessment of Endocrine Disruptors
→ Leibniz Institut für Arbeitsforschung an der TU Dortmund (IfADo)
E-mail: degen@ifado.de

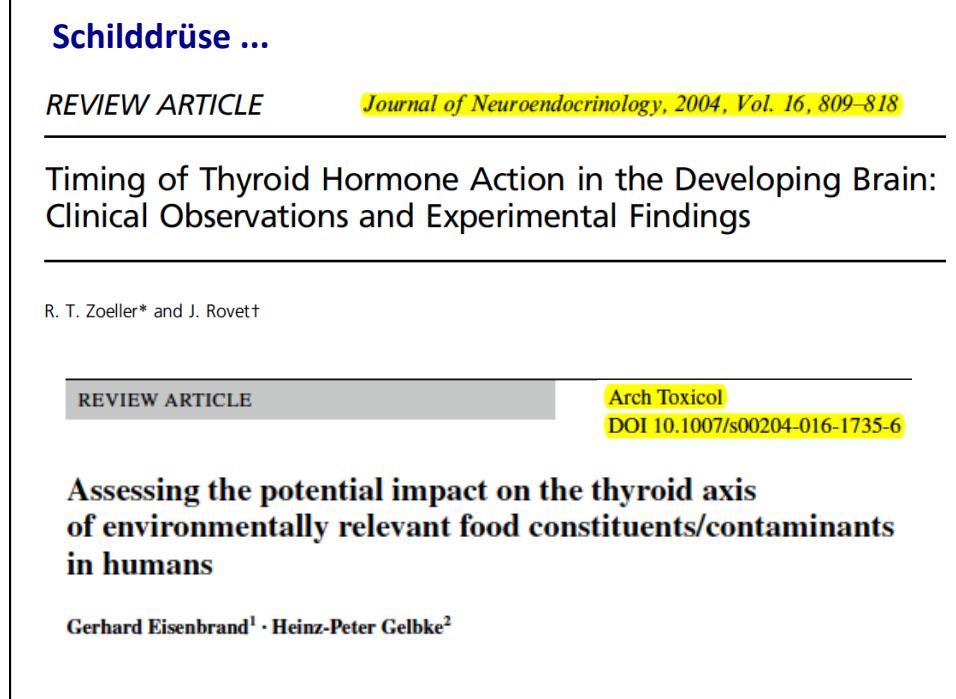

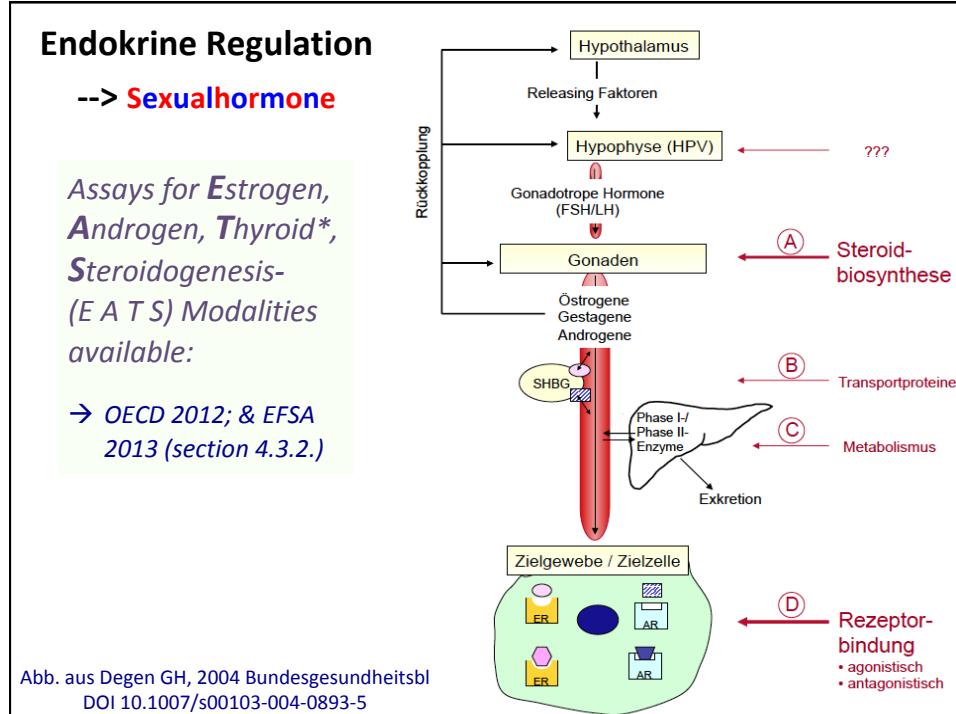

Ardeystr. 67 • D-44139 Dortmund • www.ifado.de

OUTLINE

- ❖ Endokrin Aktive Substanz / Endokriner Disruptor *
 - Definitionen (EAS or ED ?)
 - Wirkmodus (Mode of Action)
 - Regulation: *Hazard- vs. Risk-based*
 - EAS in Sonnenschutzmitteln
 - **UV Filter**
 - **Konservierungsmittel**
- ❖ Diskussion - Ausblick
 - ❖ Risikokommunikation: *EAS oder ED ?*
 - ❖ In vitro - in vivo Extrapolation

apologies for d-english

* Ein Sonderfall für die Bewertung ? !

Definitions I

WHO/IPCS 2002

*“An **endocrine disrupter** is an exogenous substance or mixture that alters function(s) of the endocrine system and consequently causes **adverse** health effects in an intact organism, or its progeny, or (sub)populations.”*

*“A **potential endocrine disrupter** is an exogenous substance or mixture that possesses properties that might be expected to lead to endocrine disruption in an intact organism, or its progeny, or (sub)populations.*

→ an endocrine active substance [EAS]

Definitions II

Adversity ?

“A change in morphology, physiology, growth, reproduction, development or lifespan of an organism which results in impairment of functional capacity or impairment of capacity to compensate for additional stress or increased susceptibility to the harmful effects of other environmental influences”.

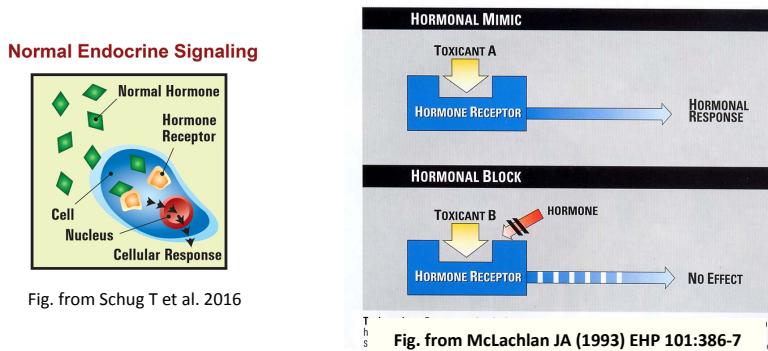

WHO/IPCS EHC 240, 2009

>> Interference with **components** of the endocrine system or
“endocrine disruption” is not a toxicological endpoint per se, but one of the many **modes-of-action** which may result in adverse effects.

WHO Report 2002

Endokrin aktive Substanzen: Modes of Action

a) Interaktion mit Hormon-Rezeptoren (agonistic, antagonistic)

b) Interferenz mit Hormon-Biosynthese, Metabolismus oder Transport

e.g. Aromatase-Inhibitors, Enzyminductors, Thyroidperoxidase Inhibitors,
Agents binding to SHBG or other transport proteins

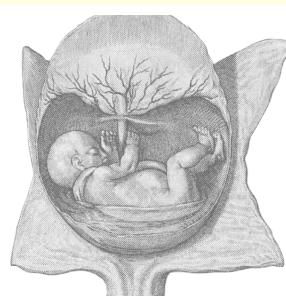

**Resultieren aus zellulären Effekten (a or b)
auch funktionale Veränderungen in vivo ??**

Pharmaceutical Drugs in Pregnancy: 'proof of principle' for Endocrine disruption

Aminoglutethimid
an *Aromatase Inhibitor*
→ Pseudohermaphroditism
in Girls *

**CONCEPT: irreversible
effects upon exposure
in critical stages of
development**

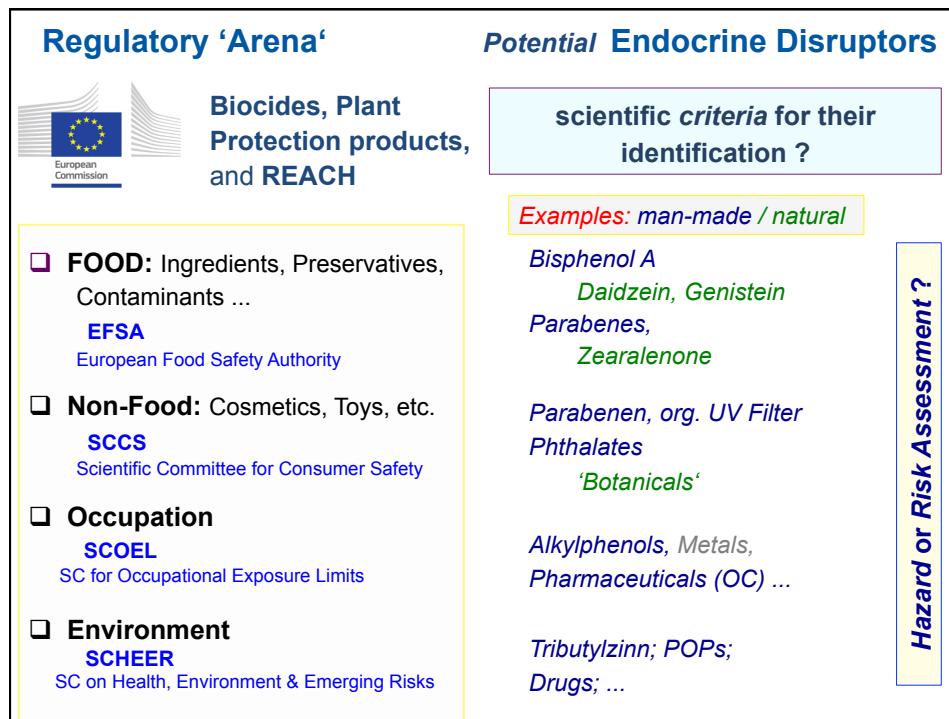

Danazol – potent *Androgen*;
at 200 mg or more
→ Virilisation in some
female offspring **

Diethylstilbestrol
*Highly potent Estrogen
and Anti-Androgen*
→ “DES-Daughters”
“DES-Sons”

MEETING REPORTS

Scientific principles for the identification of endocrine-disrupting chemicals: a consensus statement

Roland Solecki¹ · Andreas Kortenkamp² · Åke Bergman³ · Ibrahim Chahoud⁴ · Gisela H. Degen⁵ · Daniel Dietrich⁶ · Helmut Greim⁷ · Helen Häkansson⁸ · Ulla Hass⁹ · Trine Husøy¹⁰ · Miriam Jacobs¹¹ · Susan Jobling² · Alberto Mantovani¹² · Philip Marx-Stoebling¹ · Aldert Piersma¹³ · Vera Ritz¹ · Remy Slama¹⁴ · Ralf Stahlmann⁴ · Martin van den Berg¹⁵ · R. Thomas Zoeller¹⁶ · Alan R. Boobis¹⁷

"It is expected that the consensus reached will serve as an important basis for the development of regulatory ED criteria."

* * * * *

Testai E, Galli C, Dekant W, Marinovich M, Piersma AH, Sharpe RM (2013)
A plea for risk assessment of endocrine disrupting chemicals. *Toxicology* 314: 51–59
Autrup H, Barile FA, Blaauwboer B, Degen GH, Dekant W, Dietrich D, et al. (2015)
Principles of pharmacology and toxicology govern also effects of chemicals on the endocrine system. *Toxicol Sci* 146: 11–15

<p>Definitions WHO/IPCS</p> <p>A potential endocrine disruptor is an exogenous substance or mixture that possesses <i>properties that might lead to endocrine disruption</i> in an intact organism or its progeny, or (sub)populations. → EAS</p> <p>An endocrine disruptor is an exogenous substance or mixture that <u>alters function(s) of the endocrine system</u> and consequently causes adverse health effects in an intact organism or its progeny, or (sub)populations. → ED</p> <p><i>An ED defined by three criteria:</i></p> <ol style="list-style-type: none"> i) <i>an adverse effects in an intact organism or a (sub)population,</i> ii) <i>an endocrine activity, and</i> iii) <i>a plausible causal relationship between the two.</i> (EFSA; JRC; SCCS) 	<p>"The challenge"</p> <p>Number of Chemicals: Testing for hazard „endocrine active“</p> <p>Longterm-studies (Reprod./Devel. Tox) are quite demanding ... <i>and no longer permitted for cosmetic ingredients</i></p> <p>Prioritization / Safety assessment Substances of importance ?? Exposure and potency matter</p>

Cosmetic Ingredients* Opinions by the **SCCP / SCCS**

* Preservatives, UV Filter, Fragrances, others

- Parabens (several)
- Triclosan
- *ortho*-Phenolphenol
- Benzophenones and derivatives
- Homosalate
- 4-Methylbenzylidene-camphor
- 3-Benzylidene camphor
- Polycyclic musk fragrances
- Cyclosiloxanes (D4, D5)
- Melatonin (in hair tonic)
- Resorcinol
- Kojic acid

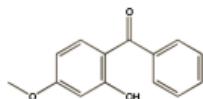

Endocrine activities and related effects evaluated in relation to exposure ...

Safety/Risk assessment used for **Regulations:**

- on **permitted use levels** in cosmetic products or ..
- restrictions / **ban of an ingredient** when MOS < 100 or safe levels cannot be defined ...

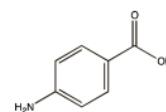

UV-Filter: Some structures, examples

Benzophenones

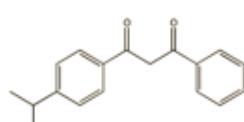

Benzophenone-3

PABA para-amino-benzoic acid

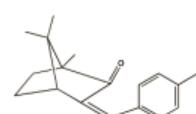

Dibenzoylmethanes

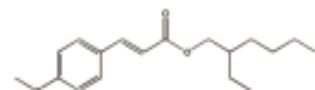

Isopropyl-Dibenzoylmethanes (Eusolex 8020)

Camphor

4-methylbenzylidene camphor (Enzacamene)

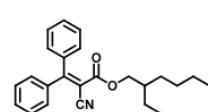

Cinnamates

Ethylhexyl methoxycinnamate

Octocrylene

(diphenylacrylat)

UV Filter I

Table (modified) from: Krause M et al. (2012) *Sunscreens: are they beneficial for health? An overview of endocrine disrupting properties of UV filters.* Int J Androl 35: 424-436

Table 1 Most common UV-filters in cosmetics

	Generic name	Product name	Max concentration (%)	Spectrum of action
Chemical UV-filters	Benzophenone-3	BP-3	6 ^b -10 ^{a,c}	UV-A, UV-B
	2-Cyano-3,3-diphenyl acrylic acid	OCT	10	UV-B
	3-Benzylidene camphor	3-BC	2	UV-B
	3-(4-Methyl-benzylidene) camphor	4-MBC	4	UV-B
	2-Ethylhexyl 4-methoxy cinnamate	OMC	7.5 ^b -10 ^{a,c}	UV-B
	Homosalate	HMS	10 ^b -15 ^{b,c}	UV-B
	2-Ethylhexyl 4-dimethylaminobenzoate	OD-PABA	8	UV-B
Physical UV-filter	4-Aminobenzoic acid	PABA	15 ^{b,c}	UV-B
	Titanium dioxide		25	Physical
	Zinc oxide		25-no limit	Physical

^aList of permitted UV-filters in the Council Directive of the European Committee.

^bList of permitted UV-filters in the US Food and Drug Administration monograph.

^cList of permitted UV-filters in the Australian regulatory guidelines for over-the-counter medicines (ARGOM), by the therapeutic Goods Administration.

https://ec.europa.eu/health/scientific_committees/consumer_safety/opinions_en

UV Filter II

- Axelstad M, Hass U, Kinnberg KL, Bjerregard P (2013) *Assessment of the endocrine disrupting potential of 23 UV filters.* Danish Centre of Endocrine Disruptors

Table 1. The evaluated UV-filters (INCI names)

BENZOPHENONE-4	DIETHYLAMINO HYDROXYBENZOYL HEXYL BENZOATE	ETHYLHEXYL TRIAZONE	PHENYLBENZIMIDAZOLE SULFONIC ACID
BENZOPHENONE-5	DIETHYLHEXYL BUTAMIDO TRIAZONE	HOMOSALATE	POLYACRYLAMIDOMETHYL BENZYLIDENE CAMPHOR
BENZYLIDENE CAMPHOR SULFONIC ACID	DISODIUM PHENYL DIBENZIMIDAZOLE TETRASULFONATE	ISOAMYL P-METHOXYCINNAMATE	POLYSILICON-15
BIS-ETHYLHEXYLOXYPHENOL METHOXYPHENYL TRIAZINE	DROMETRIZOLE TRISILOXANE	METHYLENE BIS-BENZOTRIAZOLYL TETRAMETHYLBUTYLPHENOL	TEREPHTHALYLIDENE DICAMPHOR SULFONIC ACID
BUTYL METHOXYDIBENZOYL METHANE	ETHYLHEXYL DIMETHYL PABA	OCTOCRYLENE	TITANIUM DIOXIDE
CAMPHOR BENZALKONIUM METHOSULFATE	ETHYLHEXYL SALICYLATE	PEG-25 PABA	

Former review of data for 7 UV filters in another context:

- Hass U, Christiansen S, Axelstad M, Boberg J, Andersson AM et al. (2012) *Evaluation of 22 SIN List 2.0 substances according to the Danish criteria for endocrine disrupters.* Danish Centre of Endocrine Disruptors
Benzophenone-1, 2, and 3 (BP-1,2 and 3), 3-Benzylidene camphor (3-BC); 4,4'-Dihydroxybenzophenone; 4-Methylbenzylidene camphor (4-MBC); Ethylhexyl methoxycinnamate (OMC)

Short term testing: some examples

Receptor binding

- Blair RM, Fang H, Branham WS et al. (2000) The **estrogen receptor relative binding affinities of 188 natural and xenochemicals**: structural diversity of ligands. *Toxicol Sci* 54:138-153
- Fang H, Tong W, Branham WS et al. (2003) **Study of 202 natural, synthetic, and environmental chemicals for binding to the androgen receptor**. *Chem Res Toxicol* 16: 1338-1358

in vitro bioassays

- Byford JR, Shaw LE, Drew MGB et al. (2002) Oestrogenic activity of **parabens** in MCF-7 breast cancer cells. *J Steroid Biochem Molec Biol* 80: 49-60
- Schreuers RHMM, Sonneveld E, Janssen JHJ, Seinen W, van der Burg B (2005) Interaction of **polycyclic musks and UV filters** with the estrogen receptor (ER), androgen receptor (AR), and progesterone receptor (PR) in reporter gene bioassays. *Toxicol Sci* 83: 264-272
- Suzuki T, Kitamura S, Khota et al. (2005) **Estrogenic and antiandrogenic** activities of **17 benzophenone derivatives** used as UV stabilizers and sunscreens. *Toxicol Appl Pharmacol* 203: 9-17
 & → *in vivo bioassays*
- Van Meeuwen JA, van Son O, Piersma AH et al. (2008) Aromatase inhibiting and combined estrogenic effects of **parabens** and estrogenic effects of **other additives in cosmetic products**. *Toxicol Appl Pharmacol* 230: 372-382

UV Filter

III

Key aspects in the safety evaluation:

- **Local effects? Systemic effects ?**
- **Critical endpoint(s) → NO(A)EL ?**
- **Sufficient info/data on ... ??**
- **Human exposure scenario**

* * * * *

Notes of Guidance, latest version of 25 april 2016:
SCCS/1564/15

→ Checklists for Dossier submission: **SCCS/1588/17**

Evaluation of a new **organic UV Filter** with poor solubility and very low dermal penetration (< 1%):

Scientific Committee of Consumer Safety (SCCS) Opinion on the safety of cosmetic ingredients **Phenylen Bis-Diphenyltriazine** (CAS No 55514-22-2)
– **S86 – Submission II SCCS/1594/18** (public consultation)

Low bioavailability (oral, dermal) !

Systemic effects also highly unlikely to occur for inorganic UV Filter !

Parabens: Structures – Evaluations

Skin, Liver

inactive Metabolite

Parahydroxy-benzoic acid

SCCP/0873/05, SCCP/0874/05,
SCCP/1017/06, SCCP/1183/08,
SCCS/1348/10, SCCS/1446/11,
SCCS/1514/13

MeP, EtP safe at 0.4% & mix 0.8%
BuP, PrP sum at 0.19% safe*

* Not to be used in leave-on products
in the nappy area due to immature
metabolism of infants < 6 months

Exposition (engl. Exposure) **Parabene**

‘Default’: Konservierungsmittel in **allen Produkten** (Menge: 17,4 g)
bzw. Körperpflegeprodukten = 269 mg/kg KG/Tag (Erwachsene)

Paraben-Gehalte im Produkt ([EU-Regulation](#)):

Methyl-P / Ethyl-P je 0,4 % (0,8 %) : 1,08 mg MeP / EtP per kg KG/Tag
Propyl-P / Butyl-P 0,19 % : 0,51 mg PrP / BuP „ „ „

Womit ? Wie hoch ?
Kosmetika, Nahrung, Pharmaka

Aufnahmepfade ?
dermal, inhalativ, oral

Wer ist exponiert ?
Erwachsene und (Klein-)Kinder

äußere Exposition !

- Dermale Penetration
- Metabolismus
- Ausscheidung (HBM)
