Current week
Concern about the impact of the novel coronavirus

To what extent are you personally concerned or not concerned about the impact of the novel coronavirus in the following areas of life? *(Response scale: 1 'not concerned at all' to 5 'very concerned')*

- **social relationships**: 48% not concerned (at all), 25% medium, 26% (very) concerned
- **economical situation**: 54% not concerned (at all), 23% medium, 23% (very) concerned
- **physical health**: 61% not concerned (at all), 20% medium, 19% (very) concerned
- **mental health**: 70% not concerned (at all), 18% medium, 12% (very) concerned

Figures given in percentages
Basis: 1.002–1.009 participants
Perceived informedness about what is happening
How well or badly do you feel informed about what is happening with the novel coronavirus? *(Response scale: 1 ‘very bad’ to 5 ‘very good’)*

Figures given in percentages
Basis: 1.006 participants
Evaluation of media coverage

How do you evaluate the overall media coverage of the novel coronavirus?

(Response options: ‘downplaying’, ‘appropriate’, ‘exaggerated’)

- 65% appropriate
- 30% exaggerated
- 5% downplaying

Figures given in percentages
Basis: 982 participants
Used channels of information

What channels do you use to inform yourself about what is happening with the novel coronavirus? *(multiple selection)*

- Television: 85%
- Radio: 66%
- Personal contacts: 63%
- Print media: 61%
- Internet (excl. social media): 58%
- Social media: 25%
- Other: 9%
- I do not inform myself: 1%

Figures given in percentages
Basis: 1.015 participants
### Appropriateness of the Measures for Containment

How do you evaluate the following measures to contain the spread of the novel coronavirus?

*Response options: ‘not appropriate’, ‘appropriate’*

</table>
How were the data collected?

**Statistical population:** German-speaking population ages 14 years and over in private households in the Federal Republic of Germany

**Sampling:** Samples drawn at random from land line and mobile telephone numbers which can also include telephone numbers not listed in directories (in line with standards set by the Association of German Market Research Institutes – ADM)

**Data weighting:** Data was weighted according to gender, education, age, employment, size of city and German federal state to guarantee representativeness

**Method:** Telephone interview (CATI omnibus survey, Dual Frame)

**Presentation of results:** All figures given in percentages, rounding differences are possible, only valid responses were included (response option 'don't know' was excluded from all analyses)

**Conducted by:** Kantar
About the BfR

Do nanoparticles promote the occurrence of allergies? Does apple juice contain too much aluminium? The German Federal Institute for Risk Assessment, or BfR for short, is responsible for answering questions on all aspects of the health assessment of foods and feeds, consumer products and chemicals. Through its work, it makes a decisive contribution towards ensuring that food, products and the use of chemicals have become safer in Germany.

The Institute's main tasks comprise the assessment of existing health risks and identification of new ones, the development of recommendations to limit risks and the transparent communication of this process. This work results in the scientific advice given to political decision makers. To help with the strategic alignment of its risk communication, the BfR conducts its own research in the field of risk perception. The Institute is independent in its scientific assessments, research and communication. The BfR belongs to the portfolio of the Federal Ministry of Food and Agriculture (BMEL).
