Figures given in percentages
Basis: 995–1,007 participants
Perceived informedness about what is happening

How well or badly do you feel informed about what is happening with the novel coronavirus?

(Response scale: 1 ‘very bad’ to 5 ‘very good’)

Figures given in percentages
Basis: 1,004 participants
Evaluation of media coverage

How do you evaluate the overall media coverage of the novel coronavirus?
(Response options: ‘downplaying’, ‘appropriate’, ‘exaggerated’)

- **44** people evaluated media coverage as **exaggerated**
- **49** people evaluated media coverage as **appropriate**
- **8** people evaluated media coverage as **downplaying**

Figures given in percentages
Basis: 975 participants
Used channels of information

How often do you use the following information channels to inform yourself about what is happening with the novel coronavirus? (Response options: ‘daily’, ‘several times a week’, ‘once a week’, ‘less than once a week’, ‘never’)

Figures given in percentages

Basis: 1.002–1.007 participants
Appropriateness of the measures for containment

How do you evaluate the following measures to contain the spread of the novel coronavirus? (Response options: 'not appropriate', 'appropriate')

- Regulation on working from home: 91% appropriate, 9% not appropriate
- Mandatory distance: 91% appropriate, 9% not appropriate
- Mandatory use of masks: 89% appropriate, 11% not appropriate
- Quarantine measures: 88% appropriate, 12% not appropriate
- Limiting the number of customers: 82% appropriate, 18% not appropriate
- Cancellation of events: 76% appropriate, 24% not appropriate
- Contact restriction: 65% appropriate, 35% not appropriate
- Closure of cultural institutions: 60% appropriate, 40% not appropriate
- National vaccination strategy: 56% appropriate, 44% not appropriate
- Restriction in schools/day-care centres: 53% appropriate, 47% not appropriate
- Closure of gastronomic establishments: 47% appropriate, 53% not appropriate

Figures given in percentages
Basis: 943–1,002 participants
Current protective measures of the participants

Which of the following measures have you taken within the past 2 weeks to protect yourself or others from the novel coronavirus? (multiple selection)

- used covers for mouth and nose: 96%
- kept more distance to other people: 82%
- met friends or family less frequently: 79%
- washed hands more thoroughly: 73%
- left home less frequently: 70%
- ventilated closed rooms more frequently: 70%
- used disinfectant more frequently: 64%
- got tested for the coronavirus: 49%
- used Corona-Warn-App: 31%
- built up larger stocks: 17%
- had food delivered more frequently: 11%

Figures given in percentages
Basis: 1.001 participants
Perceived controllability of the risk of infection

How sure are you that you can protect yourself from an infection with the novel coronavirus? 
(Response scale: 1 'not sure at all' to 5 'very sure')

- **(very) sure:** 46
- **not sure (at all):** 19
- **medium:** 35

Figures given in percentages
Basis: 982 participants
Prospected probability of an infection

How high or low do you estimate the probability of being infected with the novel coronavirus via the following paths?

(Response scale: 1 ‘very low’ to 5 ‘very high’)

- **proximity to other people**
  - (very) low: 11
  - medium: 19
  - (very) high: 70

- **door handles**
  - (very) low: 33
  - medium: 25
  - (very) high: 42

How were the data collected?

**Statistical population:** German-speaking population ages 14 years and over in private households in the Federal Republic of Germany

**Sampling:** Samples drawn at random from land line and mobile telephone numbers which can also include telephone numbers not listed in directories (in line with standards set by the Association of German Market Research Institutes – ADM)

**Data weighting:** Data was weighted according to gender, education, age, employment, size of city and German federal state to guarantee representativeness

**Method:** Telephone interview (CATI omnibus survey, Dual Frame)

**Presentation of results:** All figures given in percentages, rounding differences are possible, only valid responses were included (response option ‘don’t know’ was excluded from all analyses)

**Conducted by:** Kantar GmbH
About the BfR

Do nanoparticles promote the occurrence of allergies? Does apple juice contain too much aluminium? The German Federal Institute for Risk Assessment, or BfR for short, is responsible for answering questions on all aspects of the health assessment of foods and feeds, consumer products and chemicals. Through its work, it makes a decisive contribution towards ensuring that food, products and the use of chemicals have become safer in Germany.

The Institute’s main tasks comprise the assessment of existing health risks and identification of new ones, the development of recommendations to limit risks and the transparent communication of this process. This work results in the scientific advice given to political decision makers. To help with the strategic alignment of its risk communication, the BfR conducts its own research in the field of risk perception. The Institute is independent in its scientific assessments, research and communication. The BfR belongs to the portfolio of the Federal Ministry of Food and Agriculture (BMEL).
